At Seven Seas Water Corporation, our sole mission is to deliver highly-reliable water supplies for our municipal, industrial and commercial clients. Our extensive experience utilizing advanced membrane technologies ensures that our solutions are dependable, low-cost and sustainable.”

Doug Brown, Chairman & CEO
OUR COMMITMENT TO YOUR SUCCESS

Seven Seas’ reliable water solutions address the many challenges customers face with water production and wastewater treatment. Our all-inclusive services include the design, construction and operation of custom desalination, wastewater treatment and water reuse facilities. We build dedicated facilities that are designed to operate for decades, and we are committed to your success by focusing on maximizing reliability while minimizing costs.

Water-as-a-Service™ (WAAS™)

Delivering WAAS™ means you only pay for what you need...water. We provide the expertise required to design and operate the water treatment facility and make the upfront capital investment to build the plant. All plant operations and associated costs are our responsibility and we are only compensated when we deliver the quantity and quality of water that we guarantee.

Providing WAAS™ motivates us to perform. We do so by designing and building extremely efficient and durable water treatment facilities. Our highly-experienced operations team follows strict plant operating protocols that were developed over decades of running many water and wastewater plants in diverse locations with varying operating conditions. We identify and mitigate challenges that may affect efficiency and operations, which ensures long-term plant performance. We also design redundancy into our systems to ensure that we are always able to deliver the crucial water services you require.

WHY IT REALLY WORKS

Our WAAS™ model dictates that we build facilities that we want to own and operate for the long-term, as opposed to selling you equipment simply to make a short-term profit. WAAS™ has proven to be a great solution for our customers because of our long-term focus and deep operating experience. Both our customers’ and Seven Seas Waters’ success depends on a reliable supply of water. Our services take the worry out of water for you.

Seven Seas Water was established in 1996 with a mission to provide water management services to clients in the water-scarce US Virgin Islands. Today, we are an industry leader in the Caribbean and have new operations in South America and the Middle East.
Our interests are aligned with our customers

OUR STRATEGY TO HELP YOU SUCCEED

We strive to outperform your expectations when we take on the responsibilities associated with your water management requirements. The substantial upfront investment that we make to build our plants results in strong purchasing power and economies of scale and we pass these savings on to you. Our state-of-the-art plant designs, high-quality facilities and operating expertise also result in extremely low operating costs over the long-term. Our water sale agreements also insulate our customers from unpredictable water cost increases and expenses.

We recruit local talent and train operating staff that will maintain your facility 365 days a year. We also ensure that all labor, safety and health regulation standards are met. Most importantly, we guarantee the delivery of the quality and quantity of water you need to succeed.

Our WAAS™ model motivates us to use the best available technology and to constantly upgrade our plants and processes.

From concept to commissioning, the Seven Seas Water team brings its trusted and proven global strength and local expertise to every project. We operate plants of all sizes in many different feedwater environments. Our plants have low life-cycle costs, high uptime and can be operational in very short time frames.

OUR CUSTOMERS

**Municipal**
Utilizing our design, operational and maintenance experience in a broad range of technologies, Seven Seas Water provides dependable water and wastewater services at fixed rates over long contract terms. We guarantee reliable total water management solutions with built-in redundancy and local monitoring and support 24 hours a day, 365 days a year. You can trust Seven Seas Water with one of the most critical components of your utility services.

**Industrial**
A disruption in your water supply can result in millions of dollars in lost revenue per day so it is critical that your water supply is managed by highly-skilled and experienced water professionals. Combining proven technologies with custom engineered process designs, Seven Seas Water delivers the water your business demands. Our systems are designed to operate in harsh operating environments and we have historically achieved over 97% uptime, meaning you can depend on us for the crucial water your business requires.

**Commercial**
Experienced private developers recognize that operating their own utilities can be far more expensive than anticipated. Through our end-to-end solution, you get customized, affordable and reliable water and wastewater solutions without the upfront capital investment or operational risk. We will supply the water treatment solutions you require, much like having a private utility.

“The Authority’s long-term partnership with Seven Seas has been very successful, producing the best potable water the Authority has ever had while reducing our water production costs by 50%, all without drawing on the Authority’s capital. Each project undertaken by Seven Seas was completed ahead of schedule, the delivered water quality consistently exceeds standards, and the facilities produce water amounts in excess of the contract requirements.”

Put our **expertise** to work for you

**THE TECHNOLOGY TO MEET YOUR CRITICAL WATER NEEDS**

**Potable Water**
Seven Seas Water has an impressive track record of delivering abundant, safe and reliable fresh-water to communities in water-scarce regions. We are committed to solving water challenges with customized water treatment solutions and producing dependable fresh-water supplies (dissolved air flotation, lime softening/clarification, multimedia filtration, seawater and brackish water reverse osmosis, etc).

**Industrial Applications**
Our team has unmatched experience in supplying high-quality water for refineries, power generators and other industrial applications. We have experience treating seawater, brackish water and waste streams (clarification, multimedia filtration, ultra filtration, micro filtration, reverse osmosis, electrodeionization).

**Wastewater Treatment**
As wastewater disposal regulation becomes more stringent around the world, treatment technologies have also become more complex. Seven Seas Water has the technical skills and expertise to effectively treat any waste stream and ensure that you meet or exceed the required standards (clarification, gravity filters, membrane bioreactor, ultra filtration, micro filtration, brackish water reverse osmosis).

**Water Reuse & Recovery**
From point-of-use planning and management to facility reuse design and permitting, our experienced engineering team can assist in capitalizing on the often overlooked and valuable resource of wastewater (dissolved air flotation, micro filtration, ultra filtration, nano filtration, seawater or brackish water reverse osmosis).

**Self-Contained Water Production**
To serve remote locations, emergency and temporary needs, we can quickly deploy a fleet of seawater or brackish water reverse osmosis containers with the capability of producing millions of gallons of water per day.
